

Import và Export dữ liệu từ database

- Cài đặt composer require maatwebsite/excel
- Copy 2 file vào folder config->app.php

```
Maatwebsite\Excel\ExcelServiceProvider::class, // 'providers' => [  
'Excel' => Maatwebsite\Excel\Facades\Excel::class, // 'aliases' => [  

```

- Sau đó tạo route export và import cho web.php

```
Route::post('/export-csv','ProductController@export_csv');
```

```
Route::post('/import-csv','ProductController@import_csv');
```

- Sau đó nữa là tạo 2 cái button export và import

```
<form action="{{url('admin/import-csv')}}" method="POST" enctype="multipart/form-data">  
    @csrf  
    <input type="file" name="file" accept=".xlsx"><br>  
    <input type="submit" value="Import CSV" name="import_csv" class="btn btn-warning">  
</form>  
  
<form action="{{url('admin/export-csv')}}" method="POST">  
    @csrf  
    <input type="submit" value="Export CSV" name="export_csv" class="btn btn-success">  
</form>
```

- Sau đó là tới controller ProductController

```
use App\Imports\ExcelImport;  
use App\Exports\ExcelExport;  
use Excel;  
  
public function export_csv(){  
    return Excel::download(new ExcelExport , 'product.xlsx');  
}
```

```
public function import_csv(Request $request){  
    $path = $request->file('file')->getRealPath();  
    Excel::import(new ExcelImport, $path);  
    return back();  
}
```
